# micro:Bit!

Thursday  
4:15pm-5:00pm  
3/25-5/20

Make it blink. Make it a musical instrument. Maybe even a robot? You can do it with a micro:bit, and all through coding! Our new approach using micro:bit starts with block-based scripts that make it fun and easy to build your creation. These are fun and engaging projects that will introduce students to programming their own micro-computer. This is an excellent introduction to engineering with electronics. Even better, you'll get to keep the micro:Bit at the end of the course!
