

CODING & GAME DESIGN

ON CAMPUS AT YERBA BUENA
Wednesdays, 12:40pm to 2:00pm

Instead of burning out on repetitive coding puzzles, students in **1st to 5th grade** design multiple mini-games each class. From maze racers to simple platformers, each session lets them experiment, collaborate, and explore coding concepts—like sequencing, variables, conditionals, and events—while having fun.

Progress You Can See (and Play!) You'll receive a report for your student with photos of them and links to their creations soon after each class, so they can show off their creations and even continue building at home.

Built for Beginning to Intermediate Coders. Our custom, distraction-free software is built on the Scratch language and pairs with teacher expertise to adapt to student experience—ensuring everyone feels challenged but never overwhelmed.

Cared For. We text you when your aspiring game builder safely arrives, send detailed reminders before each session, and use a digital sign-out process for approved adults. If you need help, a local support person is always a call away.
